

SERVICE INFORMATION 1/2014

HENGST filter E702L and filter set E1084L

Dear Sir or Madam,

To enable our customers to purchase the patent-protected OE Filter DAF 1931681 as a Hengst variant, it needs to be converted into the filter set E1084L (element and cap) which was developed by Hengst. The cap included in this set is required to subsequently install the Hengst filter E702L. Following the conversion (which only needs to be done once) the Hengst filter E702L or even the OE Filter DAF 1931681 can be installed during every maintenance operation, thus making regular cap changes unnecessary. The filter E702L cannot be installed with the OE cap.

Set E1084L (Hengst cap + E702L)
OE filter:1931681

E702L (only with Hengst cap)

Please refer to our online catalogue at www.hengst-catalog.com to find detailed information about the applications of the two air filters.

If you have any further questions, please do not hesitate to ask your usual contact person at Hengst.

Yours faithfully,

Hengst SE & Co. KG

i. V. Jörg Beuke
