Informations produit

Product informations

Une plaquette : « c'est composé de quoi » ?

What is a brake pad made of ?

1 Friction : appelée aussi Garniture, elle est composée de plusieurs éléments organiques ou métalliques. Le choix de la composition de la matière de la friction a une incidence directe sur les performances, le confort ou le bruit lors du freinage. La qualité de la friction est un élément essentiel pour garantir la performance de la plaquette.

Friction : Also called trim lining, it is composed of several organic or metal elements. The choice of the composition of the friction material has a direct impact on performance, comfort or noise during braking. The quality of the friction is an essential element to guarantee the performance of the brake pad.

Nota : L'amiante est interdite dans la composition de la garniture des plaquettes depuis 1997.

Note : *Asbestos is forbidden in the composition of brake linings on brake pads since 1997.*

En plus de la friction, peuvent s'ajouter des options :

Besides the friction options can be added :

- 2 Support métallique** : ➡ Revêtement métallique qui est recouvert d'une couche de polymère, il agit sur la bruyance du produit et les vibrations.
Shim *Metallic coating which is covered with a layer of polymer, it acts on the noisiness of the product and the vibrations.*
- 3 Pélliculage** : ➡ Revêtement caoutchouc qui agit sur la bruyance également.
Rubber coat *Rubber coating which also acts on the noisiness.*
- 4 Chanfrein** : ➡ Il s'agit d'une découpe de la friction, il agit sur le refroidissement et l'évacuation des particules, ainsi que sur la bruyance.
Chamfer *It is a cut of the friction; it acts on the cooling and the discharge of particles, as well as on noisiness.*
- 5 Rainure** : ➡ Elle sert au refroidissement de la garniture de plaquette et à l'évacuation des particules.
Slot *It is used for the cooling of the brake lining and brake pad and for the discharge of particles.*
